Lighting

Contract Amount
260,000

Electrical Contractor
FSG

BALLY'S ATLANTIC CITY

Atlantic City, New Jersey

Bally's of Atlantic City turned to FSG for help in designing and installing a more energy efficient system.

CHALLENGE

Casinos are the stuff of glitz and glam, and their lighting systems are the physical manifestation of the glamorous times that await inside. But operating such a massive lighting system is an expensive proposition, and Bally's of Atlantic City turned to FSG for help in designing and installing a more energy-efficient system.

SOLUTION

This project scope was to replace 6,500 150W incandescent lamps with new 8W dimmable cold cathode lamps, which increased lamp life from 2,000 hours to 18,000 hours. In addition, 29 existing obsolete dimming panels were replaced with new Leviton digital dimming panels. The existing computer controlling the dimming system was replaced with new hardware, a theatrical show controller, and a graphical user interface. All software, programming, and system start-up were included as part of the project.
