Contract Amount

\$673,000

Electrical Contractor

FSG

CHALLENGE

FSG was awarded the contract to provide and install audio/visual systems for Epsilon's new corporate offices located in Irving, Texas. The project called for full audio/visual capabilities for some 68 rooms and public spaces. The scope included large and medium-sized conference rooms, meeting rooms, operations center, a Customer Experience Center, and training rooms. In addition, a sound-masking system would be provided and installed.

SOLUTION

The standard meeting room configuration included multiple 60" to 80" LCD displays, with video and audio routed from table-top boxes to the displays, as well as wireless capability. The Customer Experience Center and adjacent 16-seat presentation room called for an 80" LCD display wired for laptop computer control via table boxes and wireless. The audio/visual system in the Operations Center consisted of six commercial-grade Planar 55" wall-mounted flat screens which display data in Epsilon's mission critical 24/7 control room. Ceiling-mounted projectors were installed in the divisible training rooms. FSG continues to service and support the Epsilon offices, and provides ongoing updates to their systems.
